
jeju Documentation

Release 0.3.5

Choonho Son

August 12, 2016

| | | |
|----------|--------------------------|-----------|
| 1 | Architecture | 3 |
| 2 | History | 5 |
| 3 | Installation | 7 |
| 3.1 | RedHat, CentOS | 7 |
| 3.2 | Debian, Ubuntu | 7 |
| 4 | How to run | 9 |
| 5 | Guide Book | 11 |

Jeju is intelligent provisioning system based on specification documents. Each S/W project has instruction documents like README.md, INSTALL.md ...

User can manually install program based on INSTALL.md. But the document may be ambiguously described. Jeju can automatically install the software instructed by INSTALL.md.

Architecture

Other methods like cher, puppet, ansible ...

This can help developer and user.

History

| Version | Description |
|---------|-----------------------------------|
| 0.3 | Support Yaml configuration update |
| 0.3.2 | Support fine grained logging |
| 0.3.4 | Fix ini editor bug |
| 0.3.5 | Better console output |

Installation

Jeju is python program. This can be easily installed by pip. If pip is not exist, run *apt-get install python-pip* or *yum install python-pip*

Jeju supports various syntax, the dependency packages are:

Syntax | Package — | — yam | ruamel.yaml, gcc expect | expect

3.1 RedHat, CentOS

```
yum install python-devel gcc expect python-pip
pip install jeju
```

3.2 Debian, Ubuntu

```
apt-get update
apt-get install python-dev gcc expect python-pip
pip install jeju
```

How to run

If you want to know detailed options.

```
jeju -h
```

Usage:

```
jeju -m <markdown guide book>
```

Guide Book

You can see many examples in jeju guide-book repository.
